

1. CERTIFIED ORGANIC

We believe in working with nature to create the most delicious wines. We fertilize and protect our vines without the use of synthetic chemicals, conserving the resources we all rely on soil, water, air, wildlife and our fellow humans.

SOUTHBROOK VINEYARDS

Welcome to Southbrook's "Green" Vineyard & Winery-Biodynamic, Organic and LEED Gold Certified.

LEED: LEADERSHIP IN ENERGY AND ENVIRONMENTAL DESIGN GREEN BUILDING RATING SYSTEM™

5. CARBON FOOTPRINT

Using Ontario-made,

light-weight wine bottles

made from recycled glass

reduces our carbon

footprint and diverts

waste from landfill

4. CONSTANT INNOVATION

Reducing our environmental

footprint is an ongoing mission.

Spraying biodynamic preparations

on three rows at a time reduces

energy use and soil compaction.

Our sheep convert solar-powered

pasture to soil fertility,

eliminating our reliance on

petroleum-derived

fertilizers.

8. SOLAR NET **METERING PROJECT**

Our new 170 MwH solar panel field, along with 135 MwH of conservation reduced our net electricity consumption by 80%. With Net Metering, we trade the daytime energy we generate on site for nighttime electricity from the grid.

9. WATER MANAGEMENT

To minimize water use, Inside the building are automatic faucets, low-flush urinals, and dual-flush toilets.

& CONSERVATION

there is no irrigation of the landscaping plants outside.

★ LEED GOLD

10. SUSTAINABLE CONSTRUCTION

15% of our construction material was made from recycled materials, and manufactured within 800 km costs. Recyclable material from our construction waste was separated and not landfilled, and all excavation soil was re-used on the property instead of

★ LEED GOLD

7. ENERGY CONSERVATION 2.0

As part of our constant quest

for improvement, in 2017 we

invested in changes to heating,

cooling and ventilation controls

and equipment, to further reduce

electricity consumption by

38% and natural gas

by 41%.

Reed Bed 14

14. WETLAND

TREATMENT SYSTEM

Because the vineyard is not

on the Town's sewage line, our

wetland system treats waste

water on site and disperses

the purified water into

the surrounding soil.

★ LEED GOLD

20% of the construction material was of the site to minimize transportation being dumped off-site.

11. WE LOVE WILDLIFE By protecting 15 acres of forest

and naturalized buffer zones on our farm, we support bio-diversity. The berm along our drainage canal provides an essential wildlife corridor.

Our insecticide and herbicide-free Monarch butterflies. We host beehives that provide honey and pollinate local

To keep people inside the building healthy, all the paints, glues, sealants and composite wood used in construction were low VOC-emitting products. The cleaning products we use are environmentally friendly.

6. ENERGY CONSERVATION

To reduce the amount of energy

that goes into the heating and

cooling of our building, the walls

are highly insulated, the windows

are triple-glazed with a low-E

coating that keeps summer sunlight

out and winter heating in, and

there are deep roof overhangs

that shade the building.

★ LEED GOLD

16. INDOOR HUMAN CARE

20. BIO-SWALE

This long drainage ditch is planted

with native wetland plants which

break down the pollution from the

stormwater collected from the

access road and parking lots.

The water is potable by the

time it flows to the municipal

drainage ditch.

★ LEED GOLD

3. SUSTAINABLE VINEYARDS

AND WINEMAKING ONTARIO

We had been reluctant to describe

ourselves as "sustainable" as the

term can be used rather loosely.

Now however, we have been

audited through the Wine Council

of Ontario program, and can

proudly claim to be certified

for Sustainable Vineyards

and Sustainable

Winemaking.

Native Meadow

Although they get less attention than non-native honeybees, there are 800 species of bees and related insects in Canada. Our uncultivated areas provide habitat for these crucial pollinators, and we have installed structures that can be used in urban areas.

RRR

18. WHITE REFLECTIVE

PVC ROOF

This keeps the building cooler

and reduces the "heat island

effect" (a problem with normal

dark roofs which soak up the

sunlight and radiate it back

as heat into the air and

the building.)

★ LEED GOLD

19. WASPS, SOLITARY & **MASON BEES**

We cultivate milkweed, a beautiful native wildflower that is the only plant where Monarchs lay their eggs, as it is the exclusive food for the larva. According to Guelph U., Milkweed has become scarce as a result of the spread of Round Up-ready, genetically-modified crops.

15. FRIENDLY

TRANSPORTATION

We have bicycle racks

for guests and staff

who ride to work.

★ LEED GOLD

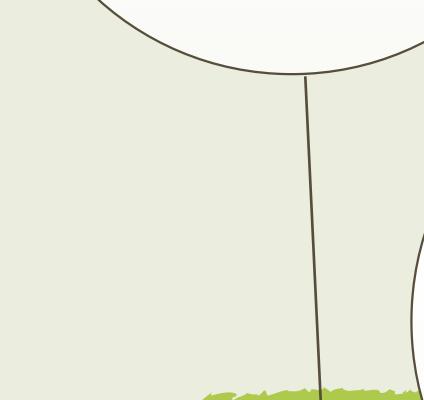

13. CERTIFIED BEE FRIENDLY

farming creates a refuge for bees, and other pollinators. The nectar produced by wildflowers throughout the farm feeds pollinators, including orchards.

12. KESTREL & BAT NESTS

By creating homes for these small raptors and flying mammals, we encourage them to become part of the farm biosphere. In return, they enliven our environment and control pests naturally.

23. LIGHTING

Floor-to-ceiling glass lets in maximum natural light to the building, reducing the need for electric lighting. Our outdoor lighting shines downwards to limit light pollution.

★ LEED GOLD

22. NATIVE MEADOW

Our long grasses and wildflowers are a crucial part of creating a connected biosphere of plants, birds and insects which contribute to the health of our biodynamic vineyard. Reduced mowing means reduced fossil fuel use and emissions, further reducing our carbon footprint.

2. CERTIFIED BIODYNAMIC

Beyond organic, we follow Steiner's

philosophy to correct the damage

caused by conventional agriculture

and regenerate a healthy environment.

We believe that enlivening our soils,

being in sync with lunar cycles,

and pasturing animals on our

farm create the healthiest

vines and most

distinctive wines.

DRIVEWAY

21. BENEFITING THE LOCAL ECONOMY

By employing local workers, purchasing local goods and services, and contributing to the provincial coffers, Canadian wineries provide benefits to all our neighbours. On average, a bottle of Canadian wine generates \$36.44 of domestic economic impact, and the Canadian wine and grape industry creates 37, 000 jobs.
